

**National Green Building Certification Program
Verifier Training Course Summary
March 1, 2008**

Objective:

To assist qualified residential building industry professionals to become accredited by the NAHB Research Center as National Green Program Verifiers

Precis:

This is a 3 hour on-line or in classroom training course covering the process required of an accredited verifier. The course is followed by a proctored test. Participants passing the test are provided with the additional information needed to be accredited and listed on www.nahbgreen.org.

Course Overview:

- Review of the history and status of the National Green Building Certification program
- Review of builder and verifier documents that are used as a part of certifying new single family homes as either bronze, silver, or gold using the NAHB Model Green Home Building Guidelines as the official certification standard
- Information regarding ANSI Standard 700 National Green building Standard and how this standard will replace the Guidelines as the official certification standard.
- Review of the decision matrix to be followed by accredited verifiers to approve all green products and features claimed by a builder in a new building

Test:

There is a one hour objective test administered at the end off the training session.
